

I listen to our local stations for K-Love on 88.9. I am unable to receive the programming content on private for profit stations. My family supports K-Love financially annually. If a LPFM station were to displace this programming, we would be unable to receive it locally. The current programming is received by many families known to me, as well as many of our church members. To preempt this programming with LPFM stations would have a detrimental effect on our community. Further, I listen to the signal generated by K-Love daily at my office, and during my travels to the Wilmington NC to Georgetown SC area. I would request that you maintain the FCC frequency distribution as it is, and allow persons seeking a low power local frequency to use the available AM frequencies.
